

**IN THE CLAIMS**

This listing of claims replaces all prior listings:

1. (Currently Amended) A display unit, comprising:  
a display panel including a substrate on which a plurality of display devices is formed,  
and a protective film formed directly on the substrate for protecting the plurality of display devices; and  
a flexible touch panel which (a) is composed of plastic films, (b) is directly bonded to a whole face of the display panel with an adhesive layer in between, and (c) detects contact with a finger, a pen or the like thereon,  
wherein,  
the adhesive layer is in direct contact with both the protective film and one of the plastic films.
2. (Previously Presented) The display unit according to claim 1, wherein the touch panel is provided on a side where the display devices of the substrate are formed, and the display devices are sealed by the touch panel.
3. (Previously Presented) The display unit according to claim 1, wherein the touch panel has a structure includes two plastic films, in which respective transparent electrodes are formed, are layered so that the transparent electrodes are placed opposite to each other.
4. - 5. (Cancelled)
6. (Previously Presented) The display unit according to claim 1, wherein the display device has an organic layer including a light emitting layer between a first electrode and a second electrode, and is an organic light emitting device which extracts the lights generated in the light emitting layer from the second electrode side.
7. - 14. (Cancelled)
